

Physics 241 Lab 00

In today's lab we are going to do very simple things that you will need to learn for writing future lab reports. I have prepared a very simple spreadsheet where the diameter of a circle is compared to its circumference. And I have plotted a graph. What I want you to do in today's lab is this: make a second graph that looks pretty much like the first graph. I have a movie that shows how to do this with LibreOffice. Ultimately since this will be new to many of you it may take some time. I can help with your effort if you are running libreoffice so I recommend (strongly) downloading a copy of libreoffice for running the spreadsheet animations which will also be used in future labs.

We will use this as the basis for creating the lab report lab00
