

Lyon College Batesville Campus: Standard Course Policies

Effective date: August 1, 2026

These policies apply to all courses offered at Lyon College's Batesville campus. Details related to a specific course can be found in the rest of the course's syllabus.

Honor Code

All graded work in this class is to be pledged in accordance with the Lyon College Honor Code. The use of a phone for any reason during the course of an exam is considered an Honor Code violation.

Class Attendance Policy

Active participation and interaction with instructors and classmates are vital parts of learning. Therefore, no matter the style or format of a given course, Lyon College students are expected to attend, according to instructor-defined standards, all class periods for the courses in which they are enrolled. Instructors must record attendance promptly in the College's Learning Management System.

Occasionally, students may be prevented from attending classes for college-sponsored events or for other unavoidable and/or uncontrollable reasons. Absences due to such reasons are excused absences. Absences for college-sponsored events are always considered excused. Instructors, on a case-by-case basis, may consider other absences excused. For excused absences, instructors cannot penalize a student's participation or graded work without first offering a reasonable make-up opportunity.

Instructors who find that a student is absent from class excessively, excused or not, and also not making good-faith efforts to keep up and meet performance standards may request that the student be involuntarily dropped from the course. Before pursuing this, the instructor must have submitted an appropriate alert via the Early Alert system at least two calendar weeks prior so that the student will have had a warning that they are in jeopardy and have time to correct the behavior and performance. Students will be given the opportunity to respond to an instructor's request to drop them. The final decision will be made by the Provost and communicated to the instructor, the student, the Registrar, and other relevant parties.

Students who are involuntarily withdrawn from a course will receive a W, WP, or WF in the course following the same rules that apply for voluntary withdrawals. Students may not be involuntarily withdrawn under this policy after the final exam period for the relevant term, sub-term, or mini-term has begun.

Recording of Classes and Meetings

To protect the intellectual property of instructors, the privacy of students and employees, and the integrity of the learning environment, students may not make audio, video, photographic, or other recordings of class sessions, laboratories, studio activities, examinations, private meetings with faculty or staff, or other instructional or academic activities without the knowledge and prior written permission of the instructor, except as required as an approved disability accommodation. Instructors may authorize recording or provide recordings of their classes on a course-by-course basis when they determine it is appropriate for instructional purposes.

Any recordings or other course materials provided or authorized (see above) by an instructor are for the personal educational use of students enrolled in the course. Students may not copy, share, post, distribute, sell, or otherwise make such recordings or materials available to others without the instructor's prior written permission.

Unauthorized recording or distribution of recordings or other instructional materials may constitute a violation of College policy, the Honor Code, copyright law, or other applicable laws and may result in disciplinary action.

Academic Support

The Morrow Academic Center (MAC) assists students who want to improve grades or academic skills by providing peer-led services including Supplemental Instruction (SI), tutoring, the Writing Center, and academic coaching as well as providing 24-hour, online tutoring for all subjects through online tutoring. A schedule of peer-led services is available at

lyon.edu/mac and online tutoring is accessed through courses in Canvas. Contact Emily Dyer, Director of Academic Support and Accessibility, at (870) 307-7319 or emily.dyer@lyon.edu for more information about MAC services.

Technology Support

For any technology-related support, you can contact the IT department by emailing support@lyon.edu or by calling 870-307-7555. You can also navigate to support.lyon.edu to submit a ticket request. Your course content will be accessible digitally using the Canvas Learning Management System (LMS), which uses your myLyon credentials for your student login. To access Canvas, login at lyon.instructure.com.

NOTE: Students taking RISE courses will use the [RISE Canvas LMS login](#).

Disabilities

Students seeking reasonable accommodations for learning, psychological, or physical disabilities must contact Emily Dyer, Director of Academic Support and Accessibility, in the Morrow Academic Center at (870) 307-7319 or at emily.dyer@lyon.edu.

Harassment, Discrimination, and Sexual Misconduct

Lyon College seeks to provide all members of the community with a safe and secure learning and work environment that is free of crime and/or policy violations motivated by discrimination, sexual and bias-related harassment, and other violations of rights. The College has a zero-tolerance policy against gender-based misconduct, sexual assault, and interpersonal violence toward any member or guest of the Lyon Community. The College encourages anyone experiencing or knows of someone experiencing harassment, discrimination, or sexual misconduct to speak to and file an official report with our Title IX Coordinator, located in the Nichols Building, office 12 near the north exit. All college employees (faculty, staff, administrators) are required to report actual or suspected incidents of harassment, discrimination, intimidation, and violence to appropriate officials immediately. However, there are limited exceptions, referred to as confidential reporters (Campus Clinic Director, the Chaplain, or the Director of Mental and Behavioral Health). Confidentiality will be maintained to the greatest extent possible within the constraints of the law. [Title IX Reporting Tool](#). [Lyon College Title IX Policy](#).

Mental & Behavioral Health

Lyon College is dedicated to ensuring each student has access to mental and behavioral health resources. The College's Mental and Behavioral Health Office is located in Edwards Commons and is partnered with White River Health's Behavioral Health Clinic. The office is committed to helping the Lyon community achieve maximum mental and behavioral wellness through both preventative and reactive care. A full-time, licensed, professional counselor provides counseling, consultations, outreach, workshops, and many more mental and behavioral services to Lyon students, faculty, and staff at no cost. The Mental and Behavioral Health Office also provides access to White River Health's services and facilities, including medication management and in-patient and out-patient care. To make an appointment, contact counseling@lyon.edu.

The rest of a course's syllabus will include at least the following:

- A description of the course consistent with the Lyon College catalog.
- A list of student learning outcomes for the course.
- A summary of all course requirements.
- An explanation of the grading system to be used in the course.
- Any course-specific attendance policies that go beyond the College policy.
- Details about what constitutes acceptable and unacceptable student collaboration on graded work.

Tentative Syllabus for Physics 321.01: Fall 2026
Topic: Research topics in Physics. Topic : astrophotography

Professor: Dr. Stuart Hutton
Office: Derby Center: 248 Research Lab: Derby 219: General Physics lab: 148
Phone: * 307 7560**
Email: stuart.hutton@lyon.edu
To access the Physics Gateway: <http://physics.lyon.edu>

Office Hours

I will schedule several office hour blocks. I will be very close to my office during these times. Otherwise, I will usually be close to my office. If you want to find me outside of office hours, make an appointment so that you will be sure to find me. My schedule is located on the physics home page which you may review to determine office hours.

[Location:Meeting times] = To be determined

Grading

As a general guide to grades, grades will be assigned as follows:

100-90]	(90-80]	(80-70]	(70-60]	<(60
A	B	C	D	F

You are required in this course to spend **1 hour minimum in documented research time for each credit hour** of the course per week for a minimum of 10 weeks. Weather may delay observations so the times can be switched slightly and 1 hour of observation time excludes time for setup of the telescope. If it is a clear night, and you have time, I really encourage you to not put off the observations. Electronically pledged weekly progress reports will count for 10% of your grade. These will be due on the day each week that we meet for class. **We will be meeting once each week for discussion and instruction. You will also want to front load your work towards the beginning of the semester rather than the end. It starts to get cold at night in November and concerns about rain and cloud cover need to be considered. We will have 15 class meetings.** You will want to keep a record documenting your laboratory effort as the course progresses since this comprises 10% of your grade for 10 events. You will also be required periodically to provide me with oral progress reports which will count for part of the 70% grade. You will be required to keep a record (it can be electronic) documenting your weekly laboratory effort. All of these 3 portions should be combined with your final report notebook / portfolio presentation which will be a single pdf document submitted to me. This provides 70% of your grade so you want to take care with this. The various credit percentages are allocated as follows:

Weekly electronic pledged progress reports which show real progress:10% total
10 total (each report is worth 1 points for a total of 10%)

Final report and notebook/portfolio presentation: 70% total

Group construction of poster for scarf for presentation in the spring: 20%

Your portfolio will consist of a minimum of **quality** images of at least 10 different astronomical bodies together with a description of what is being shown. Additionally, at least one additional image must be taken with the ZWO ASI585 MC astrophotography camera (which we will do as a class.) Of the 10 images, 7 must be taken with the telescope. I expect that you will have more quality images in your portfolio than this bare minimum. Your images will also be used with your scarf poster construction. Note that all submitted materials will be due (as in completed) by December 04, 2026. **You are also required to submit a compendium of your weekly progress reports on this day.**

In this course, you agree to make a team scarf presentation in the spring. If you are not present at Lyon in the spring, you will need to overload on your contributions to the scarf poster. You will be expected to be present for the spring scarf presentation and to actively discuss your work. This poster should be largely completed by December 8, 2026. Depending upon the spring class, you may need to meet in the spring with other colleagues to put together the final form for the poster.

Course Objectives and Prerequisites
PHY 321 INDEPENDENT STUDY / 1-3 credits

Directed study on an individual basis covering topics from advanced physics. Prerequisite: PHY 210/240, PHY 220/250 and/or permission of the instructor. Course may be repeated for up to 3 credits.

Text Book

There is no required text for this course; you are sort-of writing your own textbook in this class. Among the topics which you will learn, based upon my guidance will be the basics of astronomy, and other related topics. **You will get out of this course what you put into it. This is a research course and you are expected to demonstrate independence in your work.** Much of your laboratory will be outside with the telescope and so you will need to provide time in your schedules in the evenings for this; I expect a minimum of 2 hours every 2 weeks and you will document this with your pledged progress report. You should be concerned with quality and improvement. You should be able to discuss astronomy, locate astronomical objects, be knowledgeable about them and be willing and able to teach (and brag a bit perhaps) about astronomy and astrophotography to others. I fully expect that you will also be familiar with the basics of how to align the telescope and to run the clock drive on the scope to enable longer exposures for your faint images. You will also find it extremely useful to learn how to use skymap or a similar app on your phone to help with astronomical identification. I want you to at least initially work with other students in the class. Count the pieces of equipment before you take them out. Count the pieces of equipment when you bring them back. If the two counts do not agree, you have missed something so go find it. Be very careful with the telescope because among other things, I have personal money invested with this and it is used in this class with the understanding that you will not damage it. One very important thing: never point the telescope at the sun. This will destroy the telescope. I do have a solar filter for the telescope but you will not be able to make photos using this solar filter without special equipment which I now have.

Course Description

In this course, you will have an opportunity to gain research experience with advanced topics from physics under the cover of astrophotography.

Course Objectives

As a consequence of this course, you should obtain experience in physics research under the cover of astrophotography. In addition, you should come away from this course with an ability to discuss, among peers fundamental problems involving astronomy and astrophotography.

Punctual and complete class attendance is expected and independent research hours are required. Absences will negatively impact your final grade.

Academic Honesty

If you use reference work, **be sure to include proper references and these references must be visible during your presentation.** It is expected and encouraged that students in this class will work together on homework problems. If you use reference work, be sure to include proper references. On tests, students are required to keep notes and books closed except as instructed. **Your professor will supply all the paper needed for the tests.** Any questions during tests should be directed to the professor only. **CELL PHONES AND OTHER WIRELESS OR NETWORKED DEVICES (INCLUDING COMPUTERS) MAY NOT BE USED DURING TESTS.** If you do use such devices during a test, it will automatically be considered to be a violation of the Lyon College Honor Code. Note that extensive AI usage in this course is expected and encouraged. Your use of AI in astrophotography goes significantly beyond the guidelines presented below.

All graded work in this class is to be pledged in accordance with the Lyon College Honor Code.

AI Usage Guidelines FA26

The use of generative artificial intelligence (AI) tools or automated problem-solving software presents both opportunities for learning and responsibilities regarding academic integrity. Guidelines regarding AI use as is related to academic honesty are provided later in this document. **Under no circumstances are you permitted to use AI resources on tests.**

A warning about searches and AI

A quick heads-up about AI: I am fine with you using AI search summaries to help you figure things out. In fact, just about every search engine except perhaps Searx and Searxng automatically include AI summaries, usually at the top of your search results.

Be careful! If you search for a physics concept and paste that summary into your report, keep in mind that any classmate typing a similar query into the same search engine will likely get the exact same sentences. If you paste that text into your assignment, your paper will match someone else's work word-for-word. Even if you never intended to plagiarize, submitting auto-generated text as your own writing still constitutes plagiarism—and it sticks out like a sore thumb.

In short: You are welcome to use AI tools and search summaries during your personal study time, but to get credit for your work, the actual writing must come from your own head. Do not copy and paste summaries.

Permitted Use: Post-Draft Proofreading & Editing

You are permitted to use generative AI tools to review and proofread your already written lab reports prior to submission. Think of the AI as an advanced spell checker.

Allowed: Asking the AI to flag grammar errors, typos, awkward phrasing, or run-on sentences in text you wrote.

Prohibited: Asking the AI to write the initial draft, generate explanations from scratch, or fabricate lab data.

Your Responsibility for Physics Accuracy

Generative models edit for grammatical fluency, not scientific truth. AI tools routinely "smooth out" technical prose by accidentally altering physical laws, dropping units, or changing numerical values. You are 100% responsible for reviewing every suggested edit line-by-line. If the AI changes your physics, you are accountable for the error.

An Experiment for FA26:

The one time you may use AI to assist with an initial draft

Note: this applies ONLY to Physics 241FA26 and not to any other course at Lyon.

Physics 241 requires 3 scientific reasoning (SR) paragraphs. In the following manner, you may (but are not required) use AI to assist in the development of your first draft:

Each SR covers 1 or more specific labs. You **must** submit your finished lab reports to AI, along with the rubric and guidelines for SR completion. You may ask ai to prepare a summary within the guidelines. You work from that summary to produce your initial paragraph. You may absolutely not cut and paste AI output and submit that as your paragraph. Your paragraph must still come from your words, but the summary may be used as a guideline. You are responsible to ensure that only terms covered up until that time in the course and lab are used. AI in particular will use terms and concepts that have not been covered in class in this paragraph and, back to the sore thumb, it sticks out. Be very careful: AI is very good at deception in such a way that you think it is truth. Of course, it is not a purposeful thing on the part of AI: AI follows vector dot products, cross products, and probabilities. AI does not know what the next word of output will be until it is output.

After you complete your SR paragraph, you may submit it back to AI for proofreading. Again, relatively small changes may happen but you are still responsible for the physics contained in your paragraph.

Because of the relaxed assistance, you are not permitted to hand in SR after the deadlines provided unless you had an excused absence from a particular lab. **This means you must have completed the labs and have them accepted before the deadlines.**

CLASS SCHEDULE / OFFICE HOURS Fall 2026

Schedule for Phy321: Fall 2026: Revision 01

Meeting		Date
00	Class Initialization	August 19
01	progress reports due	August 24
03	progress reports due	August 31
04	progress reports due	September 07
05	progress reports due	September 14
06	progress reports due	September 21
07	progress reports due	September 28
08	progress reports due	October 05
09	progress reports due	October 12
10	progress reports due	October 19
11	progress reports due	October 26
12	progress reports due	November 02
13	progress reports due	November 09
14	progress reports due	November 16
15	progress reports due	November 23
16	progress reports due	December 02
Last Day of Class	Portfolios due	December 04

Safety regulations for General Physics Labs Fall 2026

- (1) Anytime springs are used in lab, safety goggles must be worn.
- (2) Anytime boiling water is used in lab, safety goggles must be worn.
- (3) You should not look at laser light or point it towards other people.
- (4) In the event of a spill (which will be water), dispense a towel from the spill kit (aka towel dispenser) and wipe up the spill.
- (5) Food and drink are not permitted in lab.

Special for phy321: astrophotography: **You are strictly forbidden to direct the telescope towards the sun, or to look at it without properly shielded eyes or proper equipment. Never use the finder scope with your eye to locate the sun.** I have a sun shield for the telescope but they have been known to break. Since you will be using the telescope at night, I recommend that you coordinate your times so that observing can occur together. I do not recommend moving the telescope very far from Couch Garden but you may wish to if you need darker areas.

Attach this form to your email (as an extra attachment today) and send it today. In your email, you should say this: I have read the safety regulations attached to this email.

PHY 321 INDEPENDENT STUDY / 1-3 credits. Directed study on an individual basis covering topics from advanced physics. Prerequisite: PHY 210/240, PHY 220/250 and permission of the instructor. Course may be repeated for up to 3 credits.

General Education Objectives

- 1. Students can apply critical thinking to pose and answer questions.**
- 2. Students can use the processes and methods of science and mathematics to demonstrate how reproducible results give rise to the discovery of fundamental laws and the development of theories.**
- 3. Students can articulate a basic knowledge of current scientific understanding of the universe and the scientific and mathematical laws that govern it.**
- 4. Students can summarize, interpret, analyze, and critically evaluate data and reports relating to the natural sciences and mathematics.**

Each of these objectives is evidenced by a final portfolio, notebook compendium of updates, scarf poster/presentation.

Topics in Phy321 have varied in the periods it has been taught. During the first time it was presented, the topic was microwave interference, and scattering. The student that participated in this particular course did not complete the course. During the most recent periods, the emphasis has been upon group research projects involving ferroelectric crystals. The topics have involved growth and electronic measurement of ferroelectric crystals. As a result of this course, students obtain a more direct self-motivated approach to research typically as part of a team and this course is additionally intended to provide students with experiential learning. Evaluation of the work consists of weekly progress updates showing evidence of research progress, a more formal compilation of results at the end of the course and a formal oral presentation. Because of the very nature of research in the sciences as opposed to research in other areas of liberal arts, it is essential that the research be performed under with periodic guidance from a faculty member. For Fall 2026, the topic is astrophotography.
