

Telescope focal adjustments:

These are the number of turns clockwise from zero to get the telescope in focus.

Gabriel and I calibrated this based upon more local objects so there may be slight variations needed for astronomical bodies but these are good starting points.

- Focus:
 - With focal reducer:
 - Lens:
 - 10 and 1/2
 - Camera:
 - 5 and 1/2
 - Without focal reducer:
 - Lens:
 - 14 and 1/2
 - Camera:
 - 13 and 1/2
 - Attachment with focal reducer
 - Lens:
 - 16 and 1/2
 - Camera:
 - 14 and 1/2
 - Attachment without focal reducer:
 - Lens:
 - 18 and 1/2
 - Camera:
 - 16 and 1/2h
